

Q1. 1. Apply BFS on above graph:

BFS is a uniformed search algorithm.

Step 0:-

Put initial node S into openlist Path cost for it is 0.

S, 0 expand it to generate its child

Step 1:-

Remove S from openlist and since its not goal node nodes A, B, C.

Step 2:-

Remove A as its alphabetically first node in openlist and since its not goal node expand A to generate child nodes S and E.

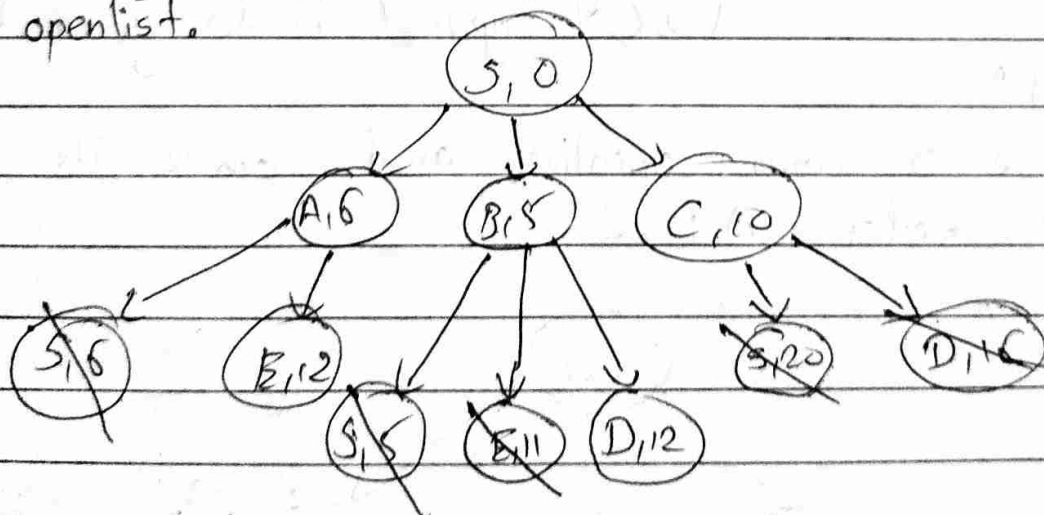

Step 3:-

Remove B as its alphabetically first node in openlist and since its not goal node expand B to generate child nodes S, E and D.

Step 4:-

Remove C as its alphabetically first node in openlist & since its not goal node expand C to generate child nodes S, and D.

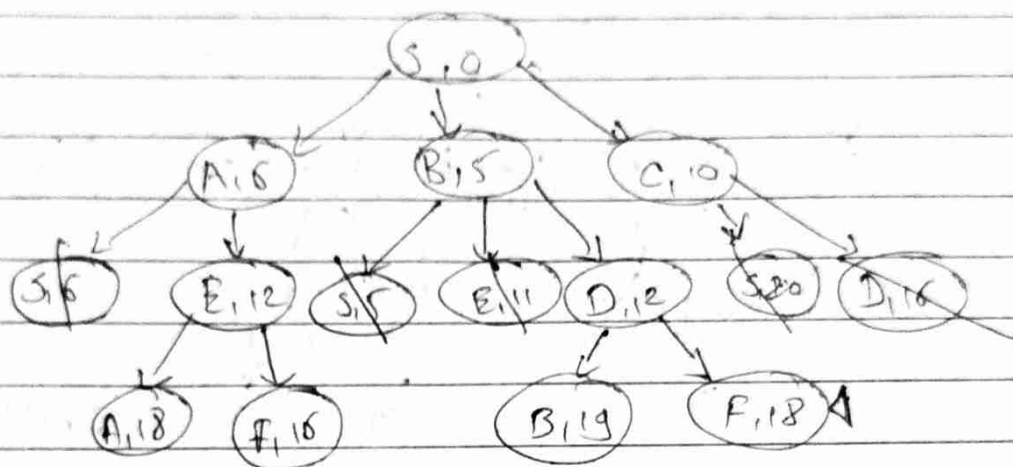

Since they are already in openlist dont put them in openlist.

Step 6:-

Next we remove E from openlist & since its goal node we will expand it to generate A and F.

Since they are already expanded they will not be put in openlist.

Step 7:-

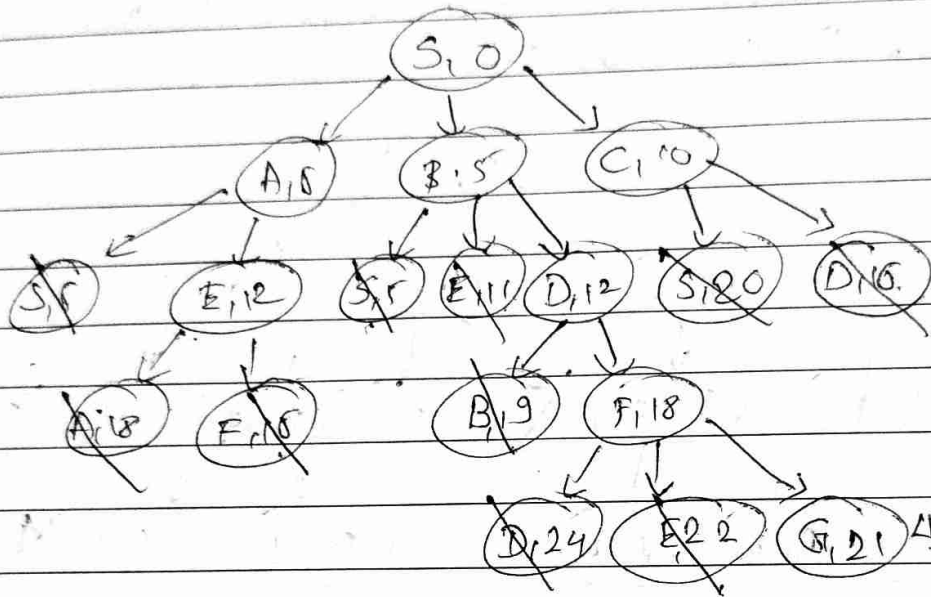

Next we remove F from openlist & since its goal node we will expand it to generate D, E & G. Since D & E are already expanded they will not be put in openlist only G is send to openlist.

Topic: _____

Step 8:-

Next we remove G from openlist. G is the global node and hence we stop search & return solution by traversing back to root node & reversing the path starting at G .

1.4)

Initialization :

Computer f-source for s aspt it in openlist.

f-source s : $f(s) = h(s) = 17 (s, 17)$

Step 1:-

f-source of successors

$f(A) = h(A) = 10$

$f(B) = h(B) = 13$

$f(C) = h(C) = 4$

Step 2:-

f-source of successors

$f(s) = h(s) = 17$

$f(D) = h(D) = 2$

Step 3:-

f-source of successors

$f(C) = h(C) = 4$

$f(B) = h(B) = 13$

$f(E) = h(E) = 1$

Topic : _____

Page no. : _____

Date. : / /

Step 4 :-

f - Source of successor

$$f(D) = h(D) = 2$$

$$f(E) = h(E) = 4$$

$$f(C) = h(C) = 0$$

Step 5 :-

Solution is $S \rightarrow C \rightarrow F \rightarrow G$ with

$$Soln :- 10 + 5 + 5 + 3 = 25$$

Q2

a) Lowest path $g(n)$ can be cost to reach goal configuration in least steps in our case, we can reach final configuration in at least 4 moves.

up, left, left. Since all moves are equally costly we compute $g(n)$ as

$$g(n) = 1 + 1 + 1 + 1$$

$$g(n) = 4.$$

Consider the 8-puzzle instance.

| | | |
|---|---|---|
| 8 | 7 | 6 |
| 2 | 1 | 5 |
| | 3 | 4 |

Solution can be represented as.

$\{ \{ 8, 7, 6 \}, \{ 2, 1, 5 \}, \{ -3, 4 \} \} \rightarrow \{ \{ 8, 7, 6 \}, \{ 2, 1, 5 \}, \{ 3, -1, 4 \} \} \rightarrow$
 $\{ \{ 8, 7, 6 \}, \{ 2, 1, 5 \}, \{ 3, 4, -1 \} \} \rightarrow$
 $\{ \{ 8, 7, 6 \}, \{ 2, 1, -1 \}, \{ 3, 4, 5 \} \} \rightarrow$
 $\{ \{ 8, 7, -1 \}, \{ 2, 1, 5 \}, \{ 3, 4, 5 \} \} \rightarrow$
 $\{ \{ 8, -7 \}, \{ 2, 1, 6 \}, \{ 3, 4, 5 \} \} \rightarrow \{ \{ -8, 7 \}, \{ 2, 1, 6 \}, \{ 3, 4, 5 \} \}$

Since all moves are equally costly cost would be $g(n) = 6$.
